**MSM-2 & MSM-3
Circuit Expanders
for
MSM-1 and MS-200**

- ✓ **Performance**
- ✓ **Durability**
- ✓ **Value**

The MSM-2 and MSM-3 are add-on modules to either an MSM-1 or MS-200. The MSM-2 adds two more circuits (C & D) while the MSM-3 adds four (C, D, E & F).

Neither the MSM-2 nor the MSM-3 can stand alone.

Connection to the MS-200 or MSM-1 is made via a 9-pin D-sub connector on the rear panel. The MSM-2 or MSM-3 derive all their power from the host unit.

Connection to outstations on the new circuits are made through XLR connectors on the rear panel. The MSM-2 provides 6 connections, 3 for each of two circuits. The MSM-3 provides 8 connections, 2 for each of four circuits. The mating cable for either of these units is included.

The new circuits created by adding either of these units will have access to any auxiliary program being input to the MS-200 or MSM-1. Program can be removed from the new circuits by a simple internal modification. A switch is available which will link all the circuits on the MSM-2 or MSM-3 to circuit A of the MSM-1 or MS-200

Each new circuit is provided with a circuit on/off push-button and a combination signal light/button. A recessed sidetone control for each pair of circuits permits the level of those circuits heard in the operator's own earspeaker.

The MSM-2 and MSM-3 can be rack mounted or free standing. In either configuration Production Intercom can supply the hardware to mechanically combine the MSM-2 or MSM-3 with its host MS-200 or MSM-1, creating one 2U (3.75 in.) package. Two examples of the many combinations are shown below.
